# A GOOD IDEA SHOULDN'T BE A COMPLICATED ONE

At Caljan Rite-Hite we have more than 40 years of experience in the development of quality solutions for loading and unloading loose products between shipping areas and all types of vehicles.

Our robust and reliable solutions are available as stand-alone systems or as an integrated part of the existing logistics solution.

**Do you get the idea?  
...just think about the financial gain!**

Automated loading and unloading has many advantages. You may choose to reduce the number of employees or double your capacity. Your employees will benefit from an improved working environment and fast loading / unloading will impress your customers.

Our extensive experience shows that the simple and logical SAFEtrack models from Caljan Rite-Hite will always result in increased profitability from day one!

## Benefits

The three most important benefits to saving time and money:

Rapid loading and unloading up to 50% faster than manual handling.

Reduced wait time for trailers.

Improved working environment with ergonomically correct working posture.

**Also two hours!**

**...with the Caljan SAFetrack Telescopic Conveyor for loading and unloading trailers of all sizes**

**Our mission is to improve industrial safety, security and productivity worldwide through quality and innovation**

On the face of it many telescopic conveyors look the same. But the difference between a Caljan SAFetrack solution and the solution provided by a competitor may well be the safety of your employees. Many of the safety features described below ensure that danger zones are concealed or shielded, keeping your employees well out of harms way.

When you select a Caljan SAFetrack solution for loading/unloading all types and sizes of truck trailers, the workplace becomes efficient, ergonomic and above all SAFE – all our machines are designed and manufactured so that they follow many **OSHA, ANSI, ASME, NFPA & UL** safety regulations. At Caljan Rite-Hite our mission is to put safety first. We believe this is simply a question of sound economics.
